Wetland

Barren Land

The National Land Cover Dataset (NLCD), produced as a cooperative effort between the U.S. Geological Survey (USGS) and the U.S. Environmental Protection Agency (US EPA), provides a consistent, land cover data layer for the conterminous U.S. using early 1990s Landsat thematic mapper (TM) data purchased by the Multi-resolution Land Characterization (MRLC) Consortium. This data can be used for landscape scale analysis in various disciplines such as wildlife ecology, forestry, or land use planning.
